BIG IDEAS IN MATHEMATICS EDUCATION: TEACHING FOR DEEP UNDERSTANDING

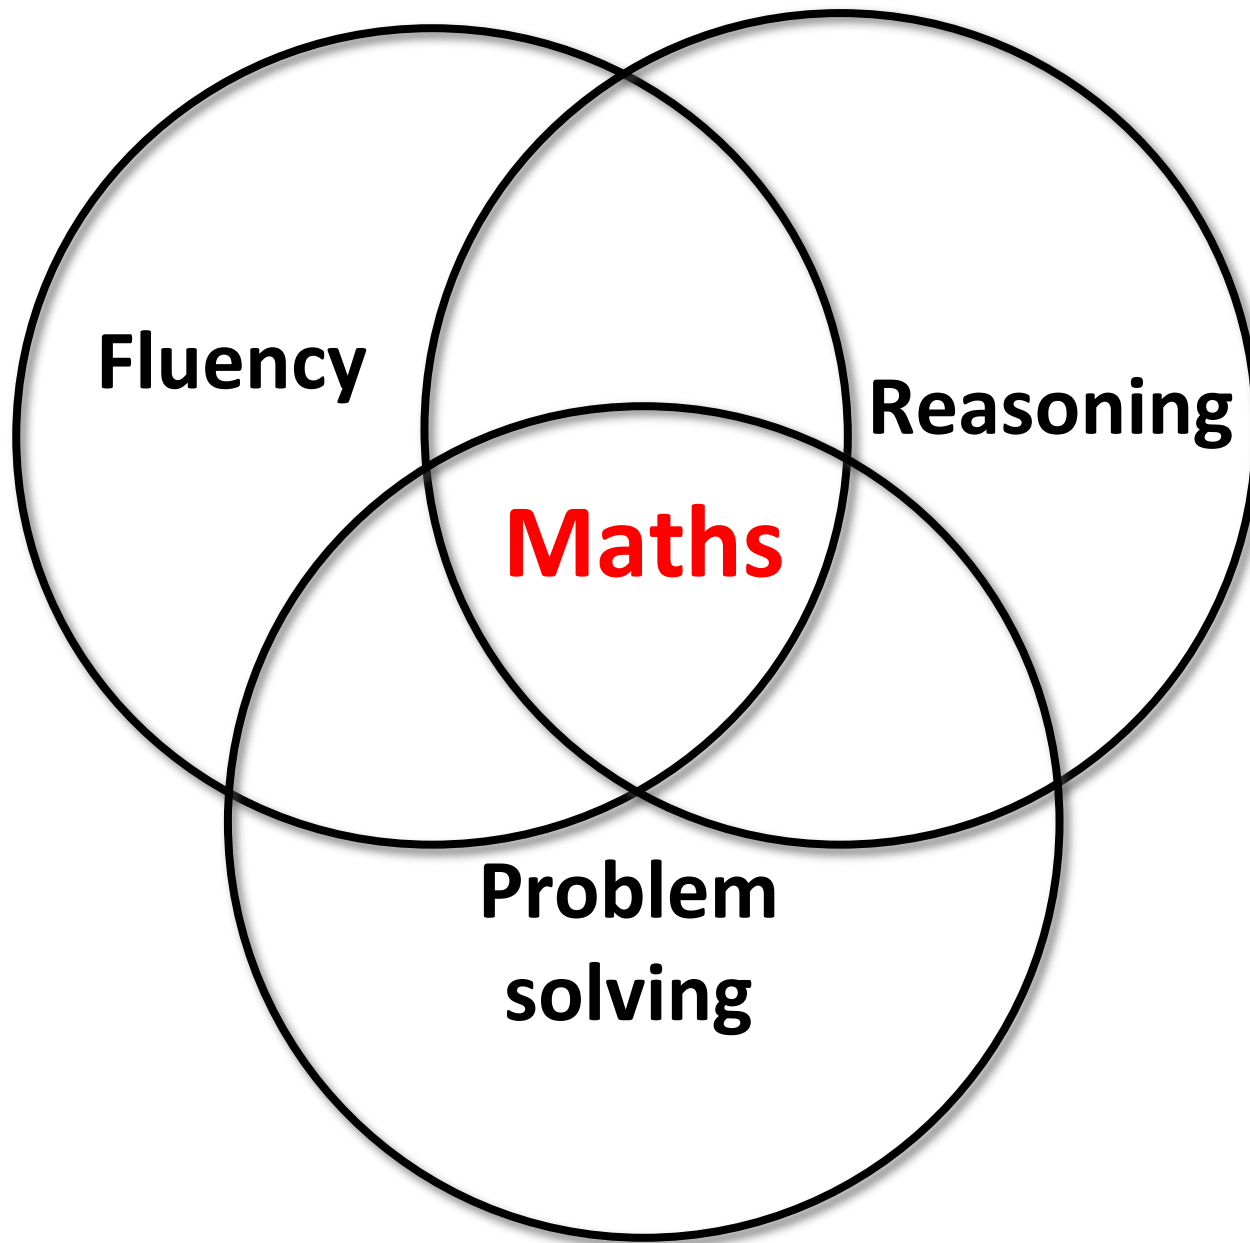

Mathematics Mastery Primary Conference
January 26 2015

Maths is not
a spectator
sport.

Jot down ...

Inquiries

- Can you find all the multiples of 9?
- Given any 2-digit number can you predict which multiple of 9 it will produce?
- Why do you get a multiple of 9?
- What happens with three-digit numbers?

Objects of learning

Indirect

- Fluency
- Problem solving
- Reasoning (Big Ideas)

PROFICIENCIES

Direct

- Fractions
- Multiplication
- 3-D shapes

CONTENT

**As teachers we need to
have Big Ideas in mind in
selecting tasks and when
teaching.**

What is a
Big Idea?

Big Ideas are

- Mathematically big
- Conceptually big
- Pedagogically big

The Big Five

- Position on the number line
- Equivalence
- Arithmetical reasoning
- Classification
- Meanings and symbols

The Big Five

- Position on the number line
- Equivalence
- Arithmetical reasoning
- Classification
- Meanings and symbols

Plus

- Pattern
- Place value
- Estimation

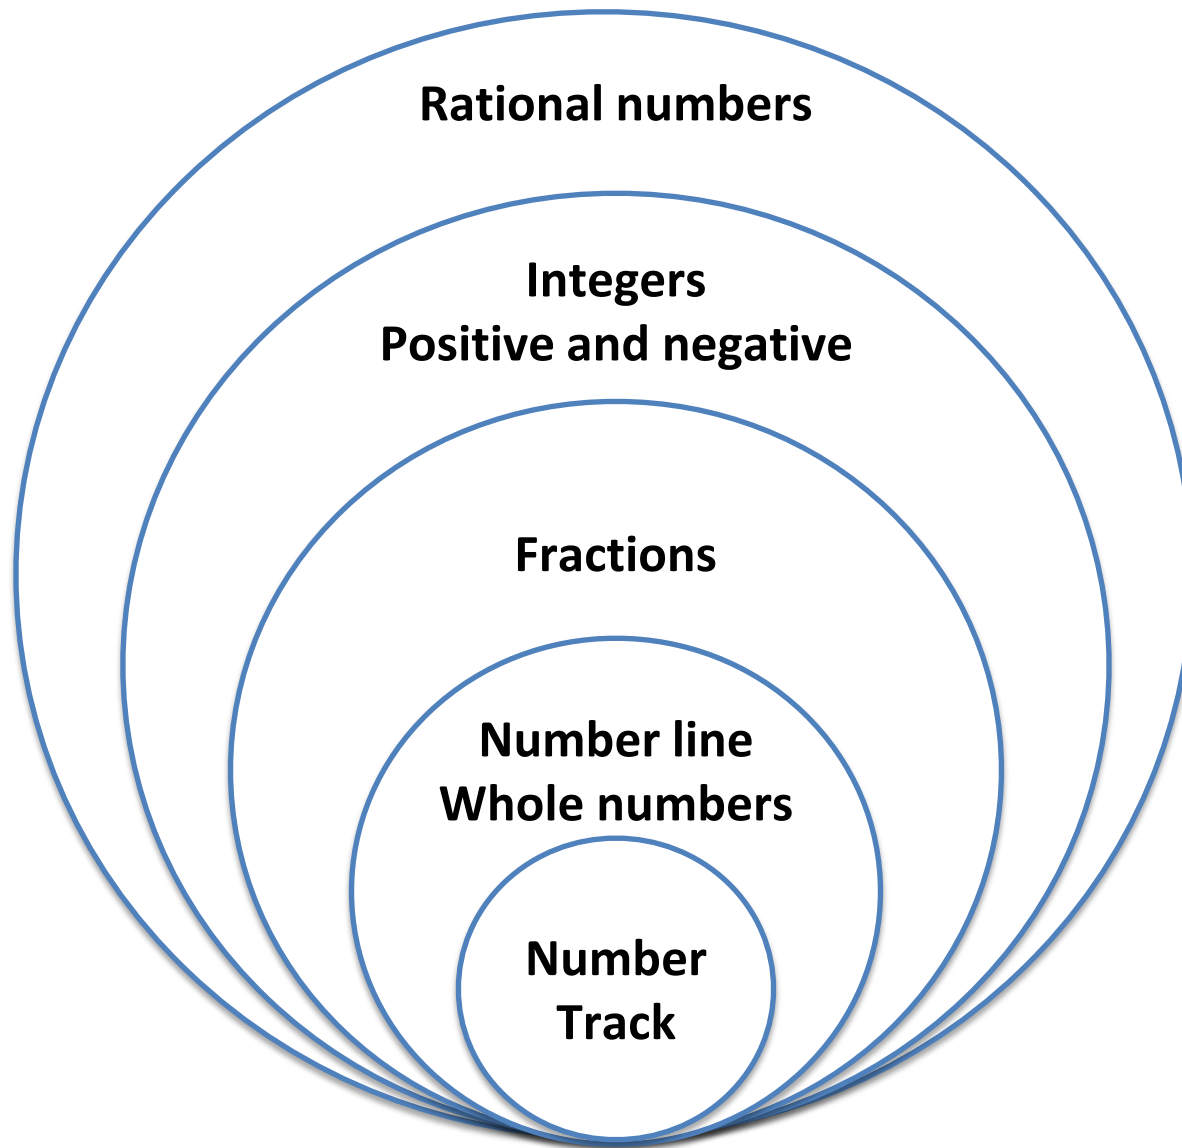

**Position on
the number
line**

**The numbers in primary
maths have a unique
position on the number
line.**

Position on the number line

- Putting numbers on a line links discrete and continuous quantities.
- Positioning numbers on the number line helps develop understanding of the number system.
- The number line helps learners connect different representations of numbers.
- Placing numbers at equal spaces on a number line is a key skill and marker of understanding.¹⁸

National Curriculum

Mathematics is an interconnected subject in which pupils need to be able to move fluently between representations of mathematical ideas.

National Curriculum

Y2

Pupils identify, represent and estimate numbers using different representations, including the number line

They check their calculations, including by adding to check subtraction and adding numbers in a different order to check addition... This establishes commutativity and associativity of addition

They use commutativity and inverse relations to develop multiplicative reasoning (for example, $4 \times 5 = 20$ and $20 \div 5 = 4$).

Pupils should count in fractions up to 10, starting from any number and using the $\frac{1}{2}$ and $\frac{2}{4}$ equivalence on the number line

Big Ideas are NOT age, level
or content dependent.

PIAGET

~~PIAGET~~

Working with Big Ideas is a way of dealing with classroom diversity and promoting inclusive classrooms.

Equivalence

**There are infinitely many
ways to represent
numbers, measures and
number sentences.**

Jot down ...

Reasoning chains

$$10 \times 8$$

$$2 \times 8$$

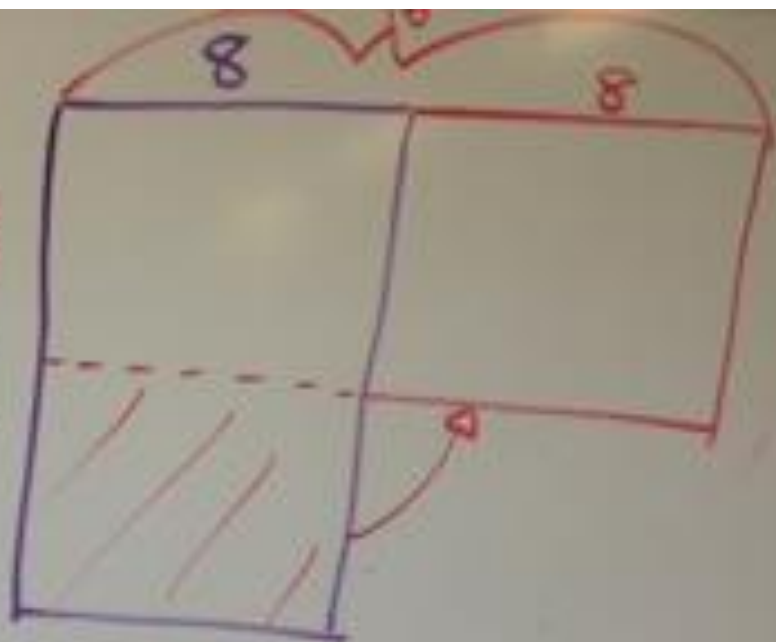

$$12 \times 8$$

$$6 \times 16$$

$$12 \times 8 = 96 \quad 6$$

$$6 \times 16 = 96 \quad 12$$

$$12 \times 8 = (6 \times 2) \times 8$$

$$(6 \times 2) \times 8 = 6 \times (2 \times 8)$$

$$(6 \times 2) \times 8 = 6 \times 16$$

So $12 \times 8 = 6 \times 16$

$$24 \times 4 = 96$$

$$12 \times 9 = 108$$

$$\begin{array}{r} \div \\ 3 \\ \hline \end{array} \quad \begin{array}{r} \times \\ 3 \\ \hline \end{array}$$

$$4 \times 27 = 9 \times 3 = 27$$

$$12 \times 9 = 108$$

$$24 \times 4\frac{1}{2} = 108$$

$$9\frac{1}{2} \times 9$$

Structure

Freedom

Experienced teachers do two apparently contradictory things: They use more structures, and yet they improvise more. . . . The challenge facing every teacher and every school is to find the balance of creativity and structure that will optimise student learning.
Sawyer

Variety or Variation?

Variety

'Pick and mix'

Most practice exercises contain variety

Variation

Careful choice of WHAT to vary

Careful choice what the variation will draw attention to

Reasoning chains

STRUCTURE

Variation builds and connects

Only revealed one at a time

FREEDOM

Pupil choice of method

Teacher real time adjustments

Equivalence

- Representations that look different can all be linked to the same underlying mathematical idea.
- Numbers and measures can be expressed in an infinite number of ways.
- Different representations highlight different aspects of the mathematics.
- Calculating is often made easier by setting up an equivalent calculation.
